

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 13/01/2016

Avalanche Problems

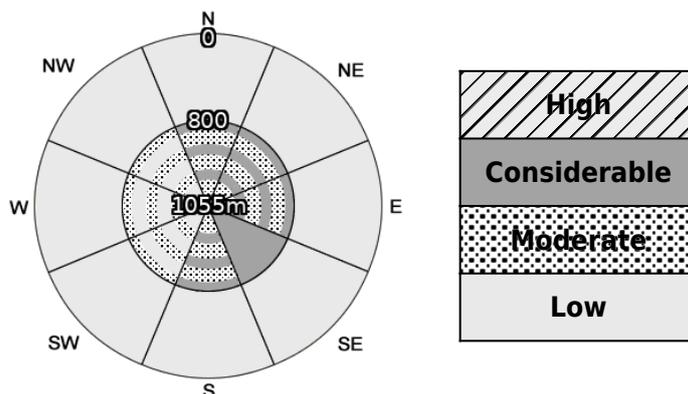

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Weekly bonded instabilities will become more widespread above 800 metres especially on North through East to Southerly aspects. As the wind direction changes further unstable windslab will develop on all aspects especially on corrie rims, convex slopes and gully tops. The avalanche hazard will be Considerable.

Forecast Weather Influences

North-West winds will be gale force then moderating by the morning backing and variable as the low pressure moves through, becoming South-West by the end of the period. Heavy snow showers are expected. Freezing level will be at 500 metres lowering to 300 meters later.

Comments

Becoming much cooler tomorrow.
