

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 18/01/2016

Avalanche Problems

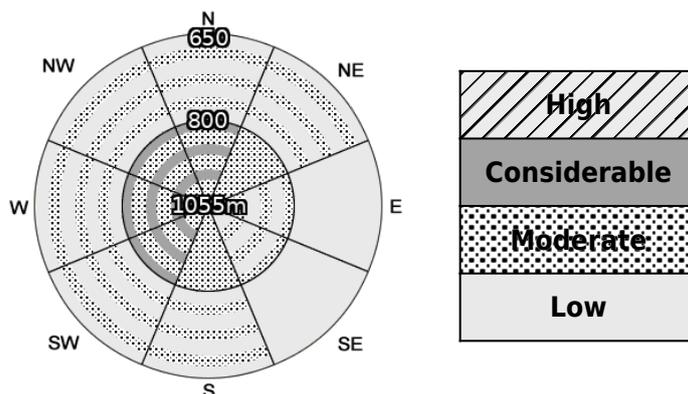

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to build on South-West through West to North aspects. Corrie rims and steep convex terrain will be most affected. Weaknesses will remain in the older snow pack on South through West to North-East aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

Moderate winds will be East-South-East backing to East. Freezing level rising to 800 metres then falling to 700 metres later. Light showers are expected, these will fall as snow at higher levels.

Comments

Pleasant walking although hard going in deeper snow above 600 meters.
