

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 31/01/2016

Avalanche Problems

Wind Slab

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Where exposed to the recent Westerly gales many slopes will remain scoured and icy. Unstable windslab will exist in sheltered summit gullies of many aspects and on slopes with a North through East to South-East aspect mainly above 750 metres; here avalanches are likely. The avalanche hazard will be Considerable.

Forecast Weather Influences

New snow mainly above 400 metres will affect the area overnight with more persistent falls through the morning. Winds strong Westerly overnight will become mainly fresh South-Westerly by morning backing to the South-East through the course of the afternoon.
