

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Thu 11/02/2016 TO 18:00HRS Fri 12/02/2016

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will be cold and dry with Easterly winds increasing slightly during late afternoon.

Forecast Snow Stability and Avalanche Hazard

Localised areas of unstable snow will persist mainly on steep North and North-East aspects above 800 metres. In many other locations, accumulations of unconsolidated but generally stable snow will be present, but some moderately stable accumulations will be present in isolated steep and wind sheltered locations. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Thu 11/02/2016

Observed Weather Influences

Fresh snowfall overnight with light winds

Observed Snow Stability and Avalanche Hazard

Localised areas of unstable snow are present mainly on steep North, North-East and East aspects above 800m. In other locations, accumulations of unconsolidated and generally stable snow are present. The avalanche hazard is Considerable

Mountain Conditions

Observed Mountain Travel Conditions

Very poor visibility over the summits. Deep unconsolidated snow underfoot in places
