

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 14/02/2016

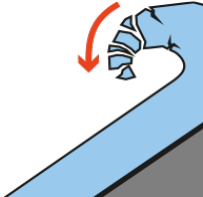

Avalanche Problems

Wind Slab

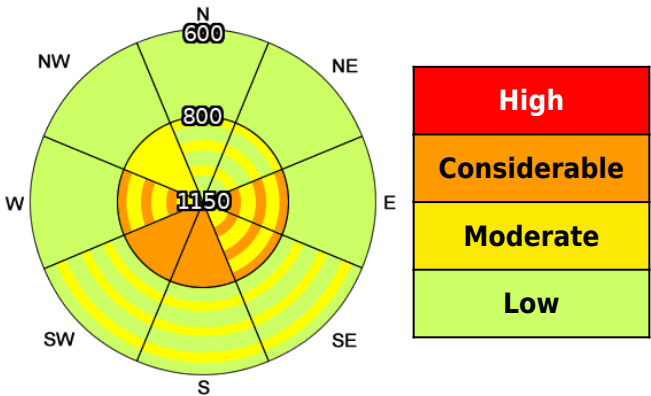

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Persistent drifting will continue to form poor to weakly bonded windslab in sheltered locations mainly on South-to South-West aspects above 800 metres. Gully exits, corrie rims and convex slopes will be particularly affected. East, South-East and West aspects will also be affected by cross-loading. Unstable cornices will continue to develop. Slopes exposed to the wind will be mostly scoured and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Dry overnight with light snow throughout the day to valley level. Fresh winds will be from the North-North-East and North.

Comments

Cold dry snow will be easily blown around the hills, expect drifting again during the day.
