Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 14/02/2016 TO 18:00HRS Mon 15/02/2016

Hazard Level	Avalanche Probabilty
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate:	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Moderate Northerly winds overnight will slowly die out during the period. It will be dry with freezing at all levels

Forecast Snow Stability and Avalanche Hazard

Unstable windslab will be present mainly at the tops of South-West and West facing slopes and gullies above 800 metres. On many other aspects, localised areas of unstable snow will be present, especially on crag aprons scarp slopes and gully exits. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Sun 14/02/2016

Observed Weather Influences

Cold and dry with moderate North-East winds over the summits

Observed Snow Stability and Avalanche Hazard

Unstable areas of windslab are present mainly at the tops of steep South-West, West and North-West aspects above 900m. On steep locations on other aspects, localised areas of unstable snow are also present. The avalanche hazard is Considerable

Mountain Conditions

Observed Mountain	Travel
Conditions	

Very poor visibility and flat light over the summits.
