Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 20/02/2016 TO 18:00HRS Sun 21/02/2016

Hazard Level	Avalanche Probabilty	
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.	
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.	
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.	
Moderate:	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.	
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.	

Forecast Weather Influences

Strong Westerly winds will continue with snow showers above 300m.

Forecast Snow Stability and Avalanche Hazard

Large areas of unstable windslab will continue to develop in locations sheltered from the Westerly winds. Greatest accumulations will be on steep North, North-East, East and South-East aspects above 800m. Avalanches are likely in these locations. Wind scoured slopes will be frozen and stable. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Sat 20/02/2016

Observed Weather Influences

Strong Westerly winds and snow showers above 400m.

Observed Snow Stability and Avalanche Hazard

Large areas of unstable windslab are present in areas sheltered from the Westerly winds. Greatest accumulations are on steep North, North-East, East and South-East aspects above 800m. Other sheltered locations are also affected. Wind scoured slopes are frozen and stable. The avalanche hazard is Considerable

Mountain Conditions

Observed I	Mountain	Travel
Conditions		

Poor visibility in showers. Strong winds
