

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 06/03/2016

Avalanche Problems

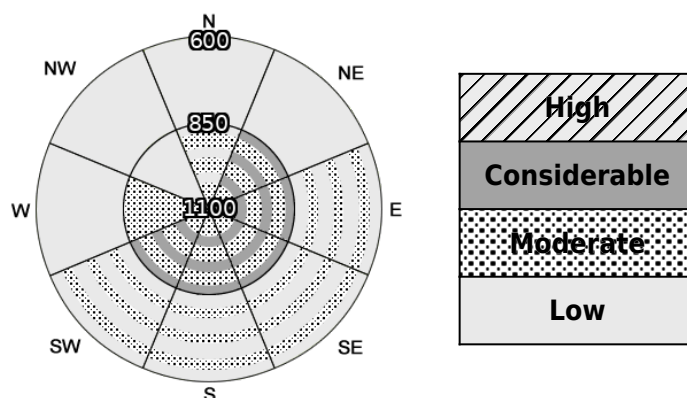

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain well consolidated in most locations below 800m. Localised instability will persist on steeper South to South-West aspects above 850m. Pre-existing cross-loaded windslab in some steep East and West facing gullies above 850m will remain marginally bonded. Residual localised instability in deeper snow on some very steep, sheltered North-East aspects above 900m. Better stability on wind-exposed locations. Large cornices. The avalanche hazard will be Considerable

Forecast Weather Influences

No precipitation is forecast. Moderate generally Northerly winds easing to light by dawn. Remaining very cold.

Comments

Wide variety of snow surfaces depending on altitude and exposure to, or shelter from, wind and sun. Complicated early spring conditions!
