

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 11/03/2016

Avalanche Problems

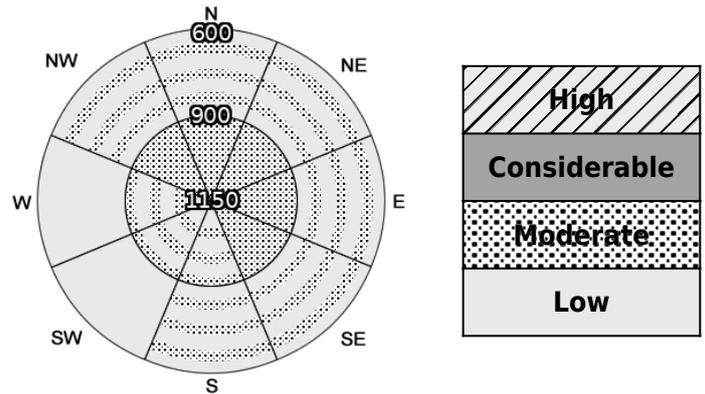

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Above 900 metres the snowpack will consolidate as temperatures rise during the day however, snowpack instabilities will remain mainly on steep North-West through North to South-East aspects with wet snow instabilities developing. Below 900 metres localised wet snow instabilities will exist on many steep slopes. Cornices will be prone to collapse affecting the slopes below. The avalanche hazard will be Moderate

Forecast Weather Influences

The freezing level will rise and be above the summits. The winds will be fresh, generally from a Southerly direction. Mainly dry with light precipitation (rain) possible later in the day.

Comments

Mild conditions are expected to last through the week-end with the freezing remaining above the summits.
