

**THE AVALANCHE HAZARD WILL BE MODERATE**

**Avalanche Hazard Forecast for Monday 14/03/2016**

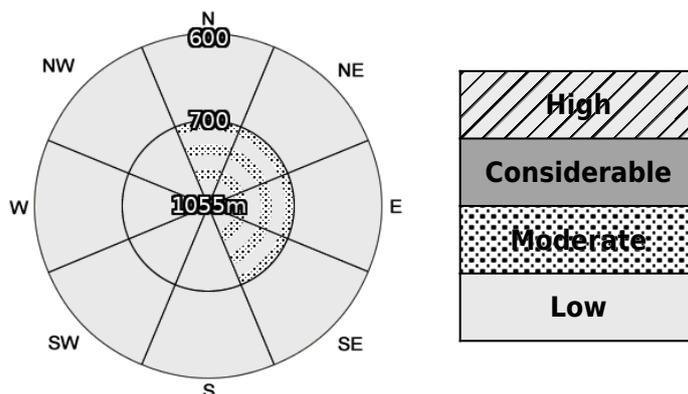

**Avalanche Problems**

Wet Snow

**Forecast Snow Stability & Avalanche Hazard**

The diminishing snowpack will remain patchy and will continue to thaw at all levels. Minor instabilities will persist affecting the steepest of slopes on the most extensive areas of snow. North through East to South-East aspects above 700 metres will be most affected and mainly steep convex and scarp slopes. Elsewhere the snowpack will be stable. Cornice lines will be stabilising. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Dry and mild, with long sunny spells and the freezing level continuing to be well above the summits. The South-West wind will ease overnight, backing to become a light to moderate East-South-Easterly.

**Comments**

High pressure conditions expected over the next few days, remaining mild, thawing snowpack.
