

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 14/03/2016

Avalanche Problems

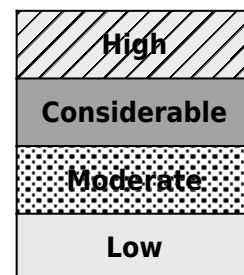

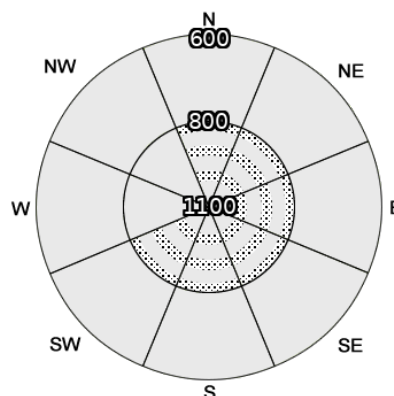

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

In most places the snowpack will be well bonded and stable. Localised wet snow surface instabilities remaining above 800 metres on steep North through East to South-West aspects. There will be a possibility of full depth wet snow avalanches while the weather remains warm but timings of these are not predictable. Cornices will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will be warm and dry with the freezing level above the summits. Moderate South-West wind backing East-South-East.

Comments

Beware of cornice collapse and rock and ice fall while the weather remains warm.
