

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 21/03/2016

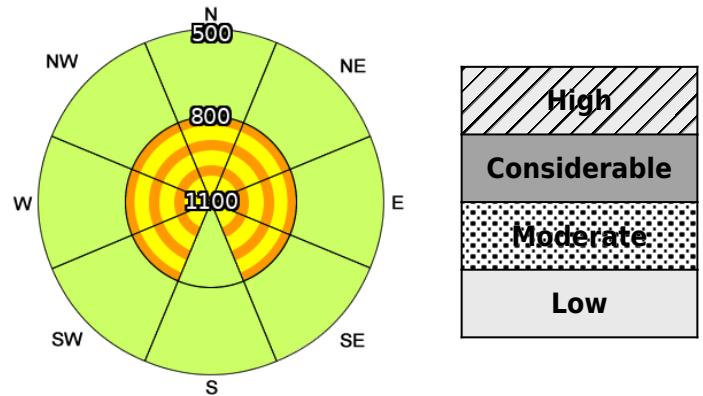

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

The generally well consolidated spring snowpack will continue to slowly thaw. Any fresh deposits will be very shallow and localised. Stability will generally be good. Remaining sections of cornice will be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will be around summit level before rising during the afternoon. There may be some very light precipitation, this falling as snow above 1000 metres, but accumulations will not be significant. Moderate winds will be from the West.

Comments

Cloudier conditions than of late expected over the next few days.
