

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 23/03/2016

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Overnight and through the morning the stable spring snowpack will continue to consolidate. Through the afternoon some very shallow and isolated deposits of windslab are expected on North to East aspects above 900 metres. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will slowly drop through the period to around 900 metres. After a dry night and morning, there will be a few showers, falling as snow above 900 metres, later in the afternoon. Strengthening winds will be from the South-West.

Comments

Strong winds and fresh snow at higher levels expected later in the week. After a benign period this will increase the avalanche hazard.
