

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 29/03/2016

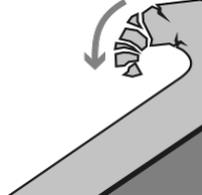

Avalanche Problems

Wind Slab

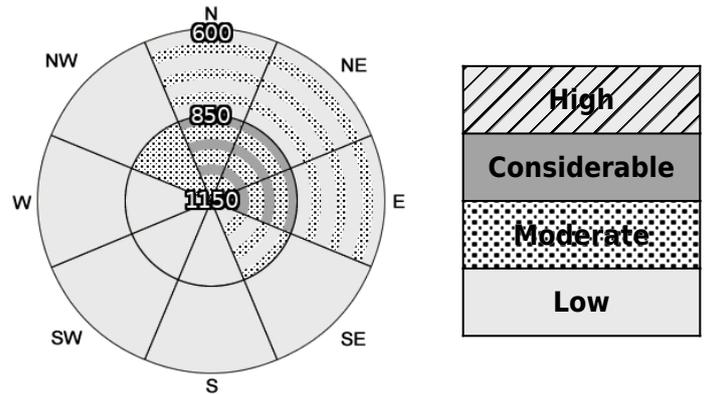

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

The snow showers will continue to add to the existing deposits of poorly bonded windslab. Locations with the greatest accumulations will be on North through East to South-Easterly aspects above 850 metres. Sheltered gully exits and steep corrie headwalls will be particularly affected. Cornices will be fragile. Windward aspects will generally be scoured and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

The freezing level will be around 600 metres, overnight, the air temperature will fall to lower levels giving a frost in the glens. Snow showers through most of the period with fresh North-West winds backing to a light South-Westerly.

Comments

Further snow forecast for Wednesday.
