Lochaber

Avalanche Hazard Forecast

Issued 29/03/2016

FOR PERIOD 18:00HRS Tue 29/03/2016 TO 18:00HRS Wed 30/03/2016

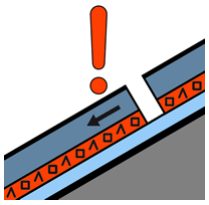

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 30/03/2016

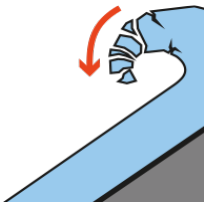

Avalanche Problems

Wind Slab

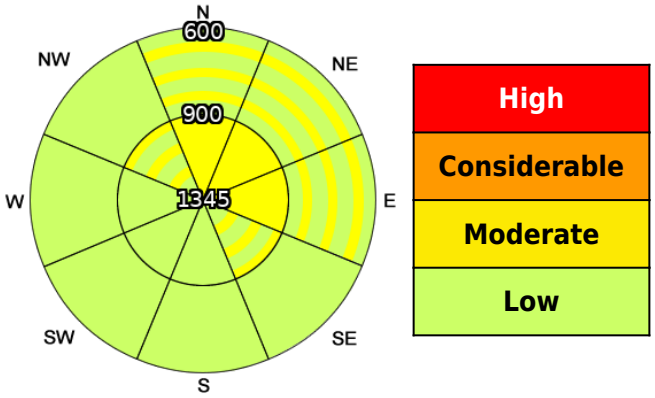

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will slowly consolidate. Instabilities will remain on mainly North to East aspects above 900 metres. Shallow deposits of fresh windslab will also accumulate on these aspects. In general the tops of slopes and gullies will be most affected. Some unstable sections of cornice will remain. The avalanche hazard will be Moderate.

Forecast Weather Influences

A few snow showers will affect the area through the period. Light mainly Southerly winds will become Westerly and strengthen through the day. The freezing level will be around 700 metres overnight, rising through the day.

Comments

Relatively settled weather conditions expected on Wednesday and Thursday. All change, and not in a good way, on Friday.
