

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Wednesday 30/03/2016****Avalanche Problems****Persistent Weak Layers****Forecast Snow Stability & Avalanche Hazard**

New snow will continue to accumulate above 600 metres in locations sheltered from both wind and sun. Greatest accumulations will be in the tops of gullies, around corrie rims and steep convex terrain on North through East to South-East aspects above 800 metres. Isolated patches of instability will be present where snow accumulates to depth over existing weaknesses in the snowpack. Aspects exposed to the sun and exposed ridges will have minimal snow cover. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Snow showers are expected throughout the forecast period. The freezing level will be around 700 metres. Winds will be light South-Easterly initially before veering through West to North-West during the day, increasing in strength with gusts to 20 mph.

Comments

In the heavy snow showers at higher elevations it still feels like winter. When viewed from the Torridon road Liathach looks bare but hard snow remains in stream beds and the tops of access gullies.
