

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 30/03/2016 TO 18:00HRS Thu 31/03/2016

| Hazard Level | Avalanche Probability |
|--------------|--|
| Very High | Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected. |
| High | Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected. |
| Considerable | Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible. |
| Moderate | Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places. |
| Low | Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain. |

Forecast Weather Influences

Light summit winds with the freezing level around 700m. No significant new snow accumulations are expected

Forecast Snow Stability and Avalanche Hazard

Localised instabilities will be present on steep slopes, mainly on North, North-East and East aspects and slopes exposed to solar radiation. Elsewhere the snowpack will be generally well bonded and stable. The avalanche hazard will be Moderate

Observed Avalanche Hazard - Wed 30/03/2016

Observed Weather Influences

Light overnight snow clearing to leave a dry day. Freezing level around 800m with light summit winds

Observed Snow Stability and Avalanche Hazard

Localised instabilities are present on steep North, North-East and East aspects, notably on slopes exposed to solar radiation. Elsewhere the snowpack is slowly consolidating and is generally stable. The avalanche hazard is Moderate

Mountain Conditions

| | |
|-------------------------------------|--|
| Observed Mountain Travel Conditions | Snowpack getting quite soft on slopes exposed to solar radiation |
