

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 02/04/2016 TO 18:00HRS Sun 03/04/2016

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Moderate South-East winds with showers, falling as snow over the high summits.

Forecast Snow Stability and Avalanche Hazard

The existing snowpack will consolidate in the slightly warmer temperatures. Localised areas of fresh windslab will form mainly on steep North-West and North aspects above 1000m. Surface instabilities will be present on steep slopes exposed to solar radiation. Remaining cornices will be prone to collapse. The avalanche hazard will be Moderate

Observed Avalanche Hazard - Sat 02/04/2016

Observed Weather Influences

The freezing level was around 900m overnight and rose slightly today. Some light overnight snow.

Observed Snow Stability and Avalanche Hazard

The existing snowpack has a frozen crust on the surface above 900m. Localised areas of fresh windslab are present on some steep North, North-East and East aspects above 1000m. Surface instabilities have developed during the day on slopes exposed to solar radiation. The avalanche hazard is Moderate

Mountain Conditions

Observed Mountain Travel Conditions

Frozen crust on snow surface above 900m making progress arduous at times. Some deep accumulations at higher elevations
