

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 13/04/2016

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Above about 1000 metres the snowpack will continue to consolidate as the freezing level drops. Below this level the snowpack will slowly thaw and be generally stable. Any fresh deposits are not expected to be significant, and stability will remain generally good in all locations. The avalanche hazard will be Low.

Forecast Weather Influences

It will remain generally dry overnight although a few very light snow showers are possible during the morning. Moderate winds will be from the North-East. Overnight the freezing level will drop to around 1000 metres where it will remain throughout the day.

Comments

Still plenty of snow and ice at higher levels.
