Avalanche Hazard Forecast

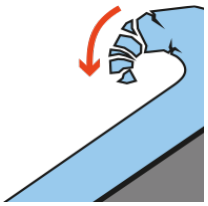
Issued 08/05/2016

FOR PERIOD 18:00HRS Sun 08/05/2016 TO 18:00HRS Mon 09/05/2016

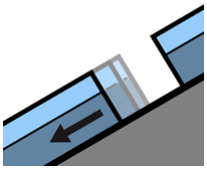
Avalanche Hazard Forecast for Monday 09/05/2016

Avalanche Problems

Wet Snow



Cornices



Gliding Snow

Forecast Snow Stability & Avalanche Hazard

Snow fields remain in all mountain areas above 800m, sometimes extensive above 1000m in the Cairngorms and Ben Nevis areas. These will continue to present a slipping and falling hazard if firm and icy. Cornices threaten many slopes and are unpredictable and prone to collapse in the warm spring conditions also, the potential for full depth avalanches due to snow creep producing Glide cracks in deeper accumulations on steep East facing slopes also presents an unpredictable hazard.
