

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 30/12/2016

Avalanche Problems

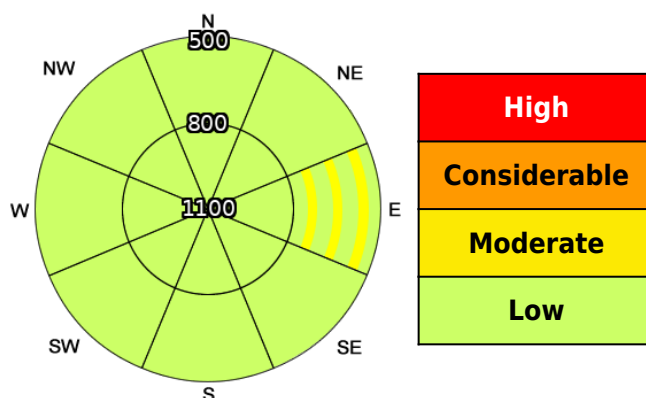

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain moist but generally well stabilised in most locations. Full depth glide cracks will continue to widen on selected steep East aspects below 800m. Some potential for full depth avalanches on inclined benches and ledges of the Post Face and in the Inner Coire of Coire Ardair. Cornices will continue to droop in the very mild, wet conditions. Ice and rock fall a consideration below some very steep crags. The avalanche hazard will be Moderate

Forecast Weather Influences

Mild and wet throughout. Strong South Westerly winds.

Comments

Snowpack stability generally good but some full depth avalanche potential in a few well known locations during the heavy thaw.
