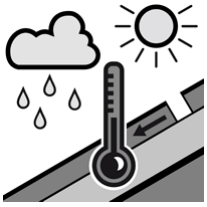
Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 02/01/2017 TO 18:00HRS Tue 03/01/2017

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 03/01/2017

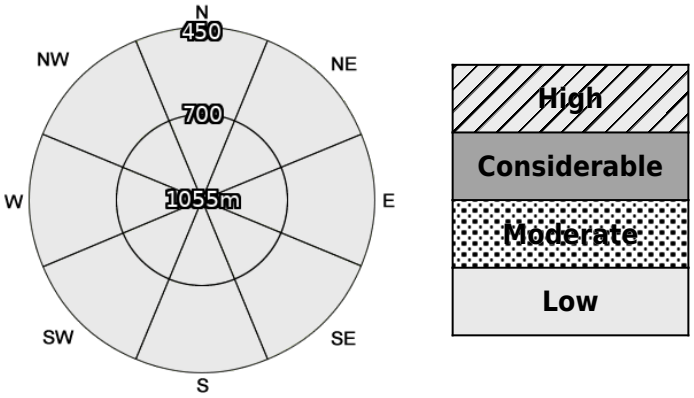
Avalanche Problems



Wet Snow

Forecast Snow Stability & Avalanche Hazard

With a limited snow cover and rising temperatures with occasional rain expected at all levels, the snowpack will become more stable and diminish throughout the period. Most snow will remain on North-East through East to South aspects, in steep locations such as coire rims and ridge flanks, above 700 metres. The avalanche hazard will be Low.



Forecast Weather Influences

Less cold air is expected overnight and tomorrow, with the freezing level rising above the tops by midnight. Occasional rain throughout the period, intensifying by mid afternoon and perhaps some snow on the highest summits. A fresh and gusty West-North-West wind will persist during the day.

Comments

Diminishing snowpack expected during the mild temperatures accompanied by occasional rain.
