Issued 04/01/2017

FOR PERIOD 18:00HRS Wed 04/01/2017 TO 18:00HRS Thu 05/01/2017

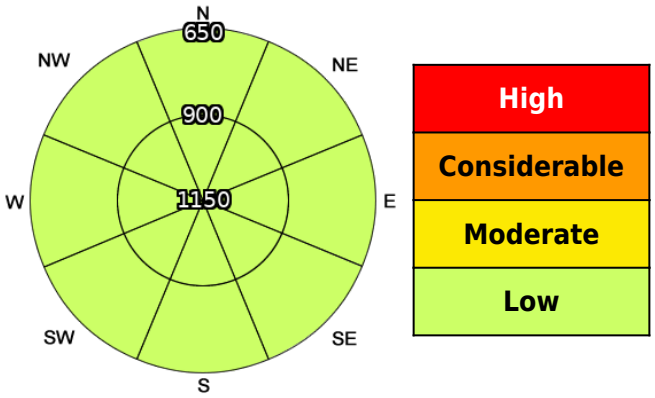

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 05/01/2017

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing snowpack, which will be mostly on North-East, through East to South aspects above 700 metres, will be well bonded and stable. The avalanche hazard will be Low.

Forecast Weather Influences

High pressure will remain and keep conditions dry. Light winds will be East-North-East at first, through East-South-East, becoming strong South-South-West by midday. Freezing level will be low at first and rise to around 2500 metres by the end of the period. No precipitation is expected.

Comments

A nice morning tomorrow, which should give good travel conditions. The snow will be firm with a surface crust.
