

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 17/01/2017

Avalanche Problems

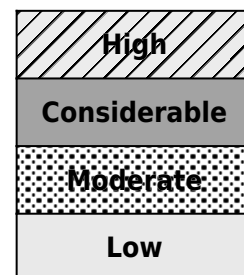

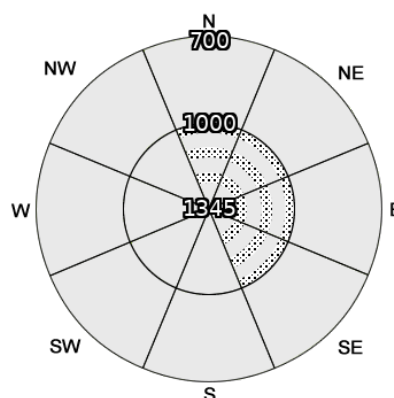

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

There will be a period of increased instability during the overnight rain. Localised wet snow instabilities will be present in steep locations mainly on North through East to South-East aspects above 1000 metres. During the day the snowpack will slowly consolidate. Any remaining cornices will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

Rain and drizzle overnight then mainly dry. Moderate Southerly winds veering South-Westerly. Freezing level above the summits.

Comments

Thawing conditions continuing. Beware of rock and ice fall on and below steep ground.
