

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 20/01/2017

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected, the remaining snowpack on mostly North-East to South-East aspects above 900 metres will remain firm and stable. The avalanche hazard will be Low

Forecast Weather Influences

Winds will be moderate to light strength variable, from a South to Westerly direction. Dry with a freezing level well above the summits but cooler temperatures in corries due to inversion conditions.

Comments

Where the snow exists it is firm and icy with serious run-outs.
