

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 25/01/2017

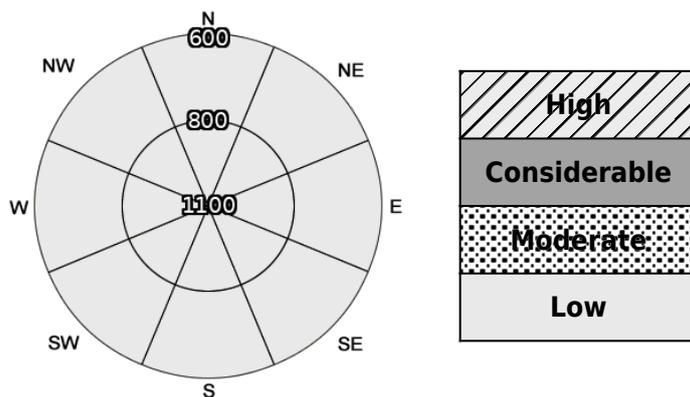

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

The softening patchy snowpack will remain well-bonded in most locations. Expanses of old snow are on North - East through East to South-East aspects above 800m. Residue of some cornices over a few very steep East aspects. The avalanche hazard will be Low

Forecast Weather Influences

Mostly dry and mild but with temperature inversion conditions; a cooling airflow to below summits by the end of the period. Winds will be strong to gale force South-South West, then Southerly
