

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Friday 10/02/2017****Avalanche Problems****Persistent Weak Layers****Cornices****Forecast Snow Stability & Avalanche Hazard**

The cold temperatures will maintain the moderate to weakly bonded windslab on West through North to North-East aspects. Deepest accumulations will be found above 800 metres in steeper, sheltered locations such as corrie rims, gullies and burn lines. Fragile cornices will be present above these slopes. Windward slopes will tend to be scoured and generally stable. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

After some light snowfall during the early evening it should be a cold, dry day with the freezing level fluctuating around 200 to 300 metres. Strong overnight South-Easterly winds will ease and back, becoming light North-Easterly.

Comments

Mountain travel on skis now possible with ascent proving much easier than descent given the current visibility and snow conditions.
