

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 17/02/2017

Avalanche Problems

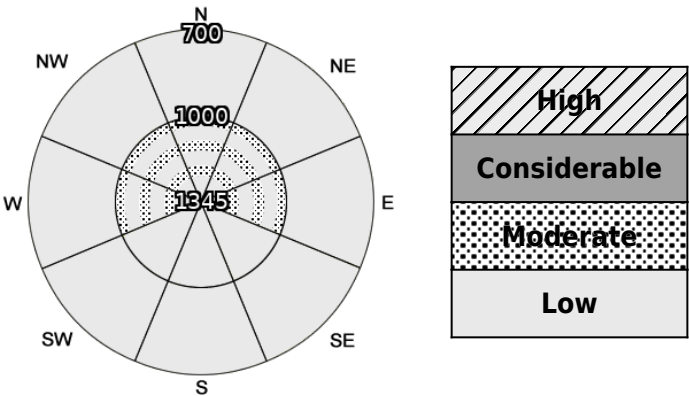

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised wet snow instabilities will be present in deeper deposits mainly on steep West through North to East aspects above 1000 metres. On other aspects and at lower elevations the remaining snowpack will be generally stable. Cornices will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

Moderate Westerly winds become light and back to South-South-Easterly during the night before increasing again during the day. Generally dry. Freezing level above the summits.

Comments

Generally warm for the next few days.
