

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 28/02/2017

Avalanche Problems

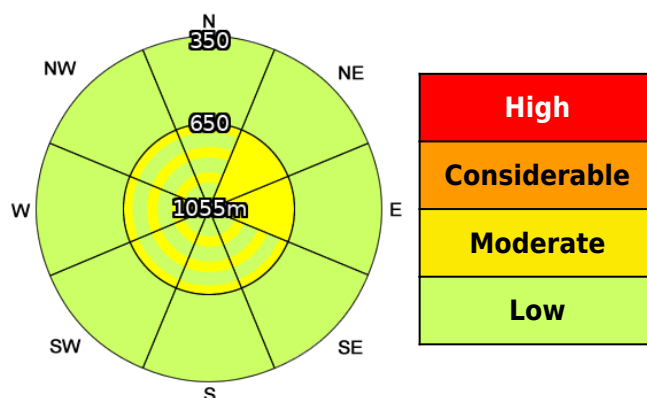

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Snow will continue to drift in the variable winds and form isolated patches of unstable windslab on all aspects above 650 metres. High North-East to East aspects will be particularly effected especially where the newly transported snow will continue to build onto the underlying older patchy snowpack. These isolated areas of windslab will be mainly on steep corrie rims and scarp slopes. The avalanche hazard will be Moderate.

Forecast Weather Influences

Moderate South-South-West winds will back Southerly overnight, through East becoming strong Northerly during the afternoon. Initially it will be dry with some moderate snow showers overnight leading to a dry sunny morning with some further snow showers tomorrow afternoon. The freezing level will remain around 400 - 500 metres.

Comments

A fine day winters day in the glen. Snow thawing in the midday sun at lower levels with transported snow building windslab and cornises at higher levels.
