

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 28/02/2017

Avalanche Problems

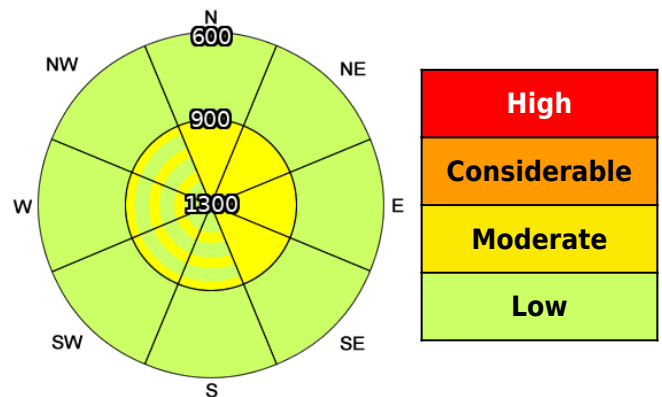

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Initially unstable windslab will persist around coire rims gully exits and crag aprons on North-West through North to East aspects above 900 metres. Through the course of the day some redistribution of snow with localised unstable windslab developing on steep sheltered South-East to South-West aspects above 900 metres. Other aspects will be affected due to cross loading. The avalanche hazard will be Moderate

Forecast Weather Influences

It is expected to be dry throughout the forecast period with moderate Westerly winds veering to the North-North-West, increasing moderate to strong through the afternoon. The freezing level will rise from 400 to 600 metres.

Comments

Vertical banks of windslab at the top of some easy grade North facing gullies.
