

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 19/03/2017

Avalanche Problems

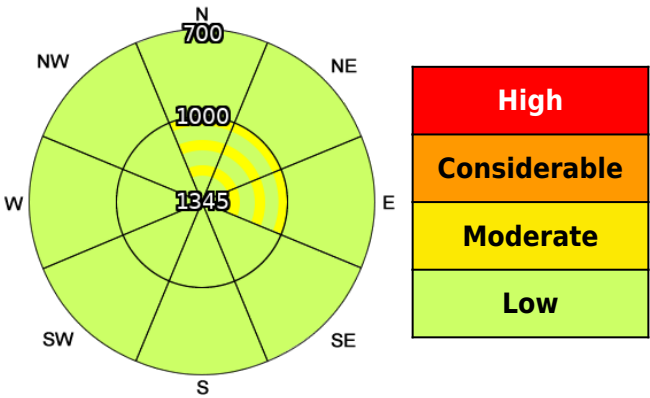

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Wet snow instabilities will remain mainly on steep North to East aspects above 1000 metres with a period of increased instability during the overnight rain. Remaining cornices will be prone to collapse. Stability will improve during the day as the temperature drops. Fresh snow deposits are not expected to be significant. The avalanche hazard will be Moderate.

Forecast Weather Influences

Moderate to strong generally South-Westerly winds. Heavy rain overnight with occasional showers during the day falling as snow above 800 metres. Freezing levels well above the summits falling to 800 metres by the end of the period.
