Torridon

Avalanche Hazard Forecast

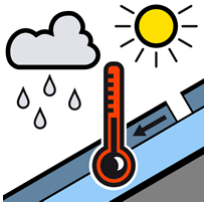

Issued 28/03/2017

FOR PERIOD 18:00HRS Tue 28/03/2017 TO 18:00HRS Wed 29/03/2017

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 29/03/2017

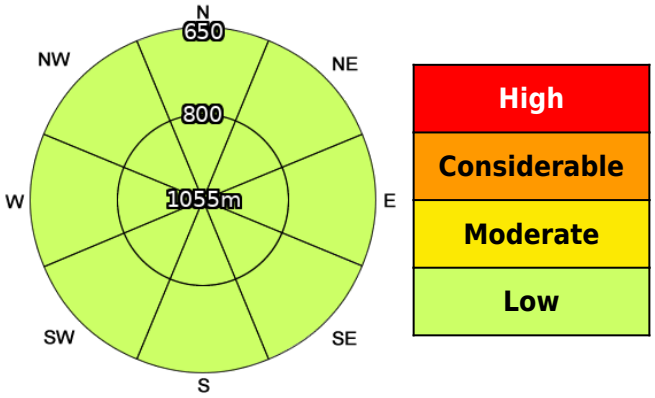

Avalanche Problems

Wet Snow

Forecast Snow Stability & Avalanche Hazard

The limited and thawing snowpack will be well consolidated and stable, becoming more moist in the afternoon, when wet snow surface instabilities may occur, particularly affecting very steep slopes. Most snow will remain on North through East to South-East aspects mainly above 800 metres. Any remaining cornices will be small and generally stable but soft. The avalanche hazard will be Low.

Forecast Weather Influences

Mostly cloudy with patchy light rain in the afternoon at all levels as the freezing level will remain well above the summits. There will be a freshening, generally East-South-East wind through the day.

Comments

Remaining mild, with a changeable weather pattern over the next few days and bands of light rain.
