

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 18/12/2017

Avalanche Problems

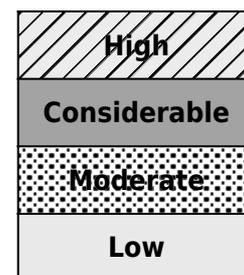

Persistent Weak Layers

Wet Snow

Forecast Snow Stability & Avalanche Hazard

Minor wet snow instabilities will persist within localised areas of deep accumulations of snow, most notably, steep slopes on North-East through South-East to South-West aspects above 700 metres. Elsewhere, the snowpack will continue to consolidate, particularly overnight in the cooler conditions. Remaining cornices will become more stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

A mainly dry and cloudy day. Milder conditions will return early morning with the freezing level well above the summits and the strong, generally South-West wind will increase to gale force later.

Comments

Very wet, very mild and very windy in the morning, but pleasant later. Tiresome walking in soft wet snow. Burns in spate.
