

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 28/12/2017

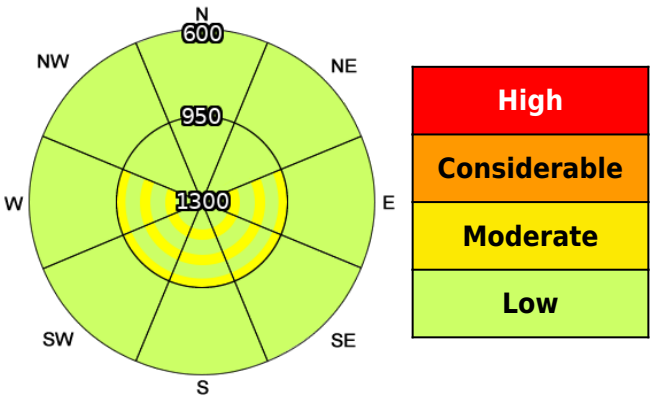

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Areas of soft unstable windslab will continue to gradually build in very isolated, steep, wind sheltered places, mostly above 1000 metres on East through South to South-Westerly aspects. Steep coire rims, gully tops and ridge lines are most affected. These areas although localised and mostly avoidable will not be significant. Elsewhere the snow covered landscape is stable. The avalanche hazard will be Moderate

Forecast Weather Influences

Remaining cold with a freezing level around 400 metres. Light snow showers are expected throughout the forecast period. Winds will be strong to moderate strength overnight lessening during the day.

Comments

Very localised soft unstable windslab in places, weaknesses will be preserved in cold temperatures. Current depth or extent not significant, this may change gradually with stronger winds and continued snowfall.
