

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 05/01/2018

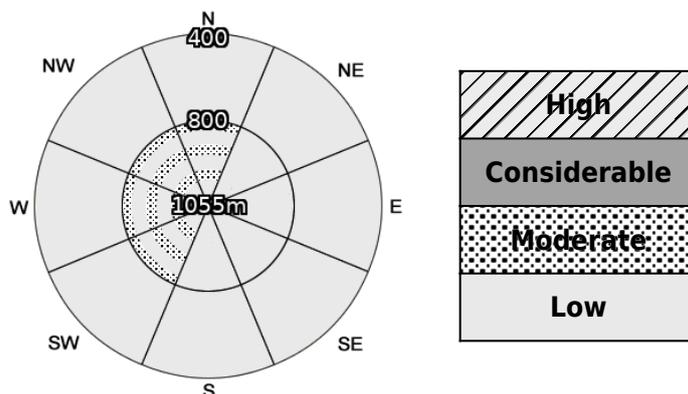

Avalanche Problems

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

A general covering of snow above 500 metres. Very localised areas of moderately bonded windslab will persist in very sheltered areas on South-West to Northerly aspects, particularly corrie rims and gully tops above 800 metres. The avalanche hazard will be Moderate

Forecast Weather Influences

Winds from an East North-Easterly direction, remaining fresh overnight and very gradually increasing during tomorrow. Very little precipitation with the freezing level at around 400 metres. Remaining cloudy round the summits.

Comments

Approach paths can be icy. However off the beaten track there is much breakable crust. Ice falling from rock buttresses still presents a hazard.
