

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 06/01/2018

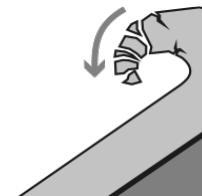

Avalanche Problems

Wind Slab

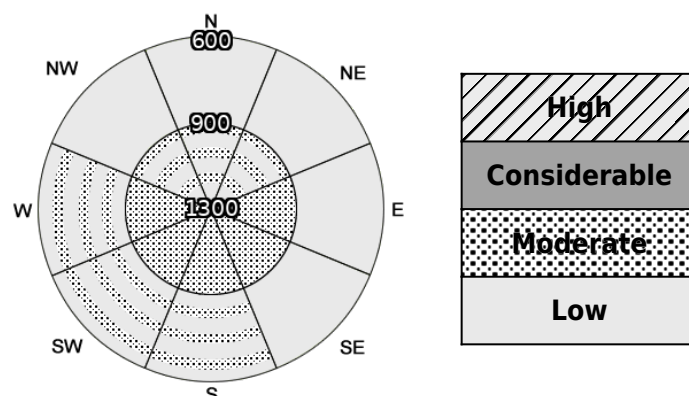

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

New accumulations of unstable windslab will develop on Southerly to Westerly aspects mainly above 900 metres. Most affected areas will be within sheltered steep and convex terrain. Instabilities will remain on North-West through North to South-East aspects mostly around coire rims, crag aprons and gully tops. Some instabilities will persist at depth in these places especially where the snowpack becomes more shallow. Fragile cornices will develop. The avalanche hazard will be Moderate.

Forecast Weather Influences

Snow showers above 500 metres overnight, these will lower to all levels through the day and becoming less frequent. Winds will be moderate to strong from the North-East easing through the day and backing to the North-North-East.

Comments

Remaining cold over the weekend.
