

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 09/01/2018

Avalanche Problems

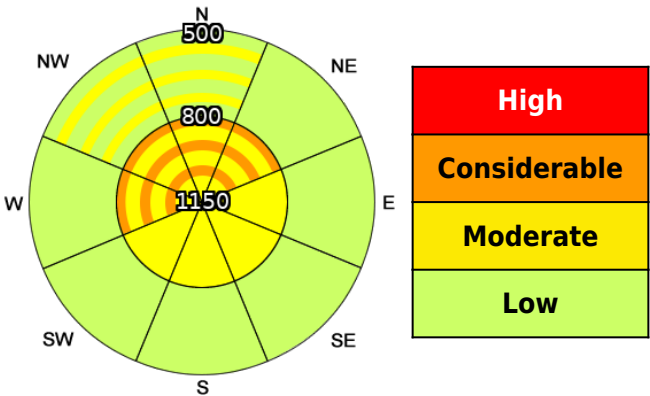

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Further redistribution of the snowpack will continue building poorly bonded windslab onto West through North to North-East aspects above 800 metres. Wind sheltered locations at the top of slopes and gully exits will be most affected. A few pockets of windslab will remain on other aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will be a generally dry day with strong South-Easterly winds. An inversion will mean there will be not be a well defined freezing level therefore temperatures will remain around freezing at most levels.

Comments

Areas of unstable snow close to ridges and coire rims.
