

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 09/01/2018

Avalanche Problems

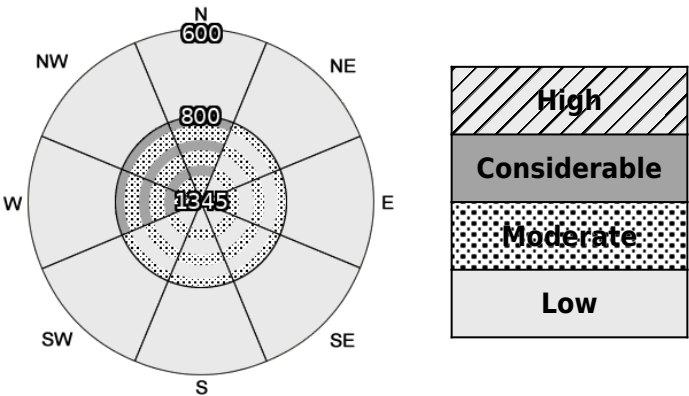

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Localised areas of unstable snow will continue to form in sheltered locations. Greatest accumulations will be on sheltered West, North-West and North aspects, but other sheltered locations will also be affected. Wind scoured slopes will be generally stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will remain dry with moderate to strong South-Easterly winds
