

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 16/01/2018

Avalanche Problems

Wind Slab

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of moderate to poorly bonded windslab will develop and become more widespread on Northerly to Easterly aspects mainly above 900 metres. Areas most affected will be in steep sheltered locations such as coire rims, gully tops, flanks and crag aprons. Fragile cornices will also develop on these aspects. Other areas also affected due to cross loading. Localised windslab will develop on some steep sheltered banks below 900 metres. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snowfall at all levels throughout the forecast period. Winds will be moderate to strong West-South-Westerly. The freezing level will fall to 200 metres.

Comments

Looking very wintry over the next few days.
