

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 17/01/2018

Avalanche Problems

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Snow transportation will continue with further wind slab deposits forming mainly above 650 meters on North through East to South aspects. Wind exposed aspects which are mainly South-West to North-West will be largely blown clear of snow. The avalanche hazard will be Moderate.

Forecast Weather Influences

Strong South-West winds will veer West to North-West and then back West-South-West by tomorrow afternoon. Frequent moderate snow showers will continue. The freezing level will be around 390 metres.

Comments

Very wintry with snow at all levels.
