

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 28/01/2018

Avalanche Problems

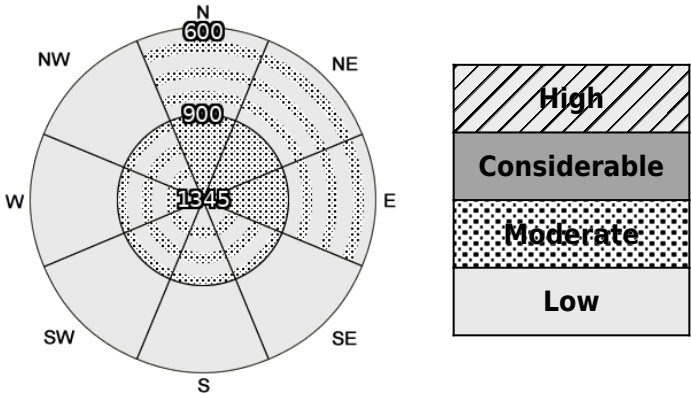

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

In the colder overnight conditions the snowpack will consolidate. Some shallow areas of windslab will be deposited on North to East aspects above 900 metres, particularly at the tops of slopes and gullies. During the day shallow wet snow instabilities are expected in these locations. Remaining cornices will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

After some overnight snow showers the freezing level will rise from about 900 metre to well above the summits early in the morning. Rain will fall at all levels through the day. Winds will be from the South-West.

Comments

Turning colder next week.
