

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 05/02/2018

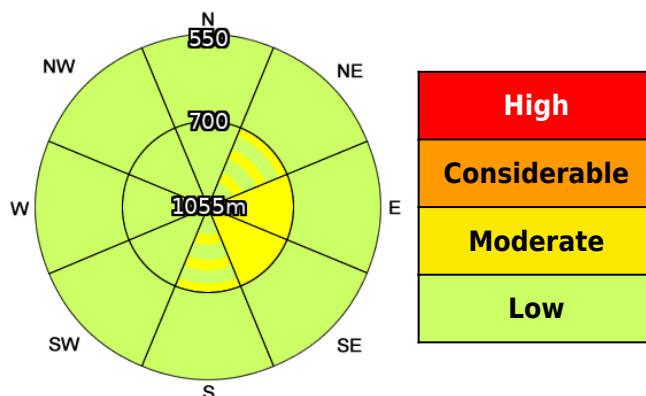

Avalanche Problems

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Little change is expected. The snowpack will remain well consolidated with good stability in most places, with recently exposed slopes, very firm and icy in places. However, weaknesses will continue to persist in areas of windslab mainly on steep slopes, North-East through East to South aspects above 700 metres, particularly affected where the windslab gains depth and extent. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will remain dry throughout the period, but with hill cloud during the day. The light and generally Southerly wind will gradually strengthen overnight becoming fresh to strong by the end of the day and the freezing level will gradually lower to around 300 metres by same time.

Comments

Good snow cover on all aspects above 600 metres. Another overnight frost is expected before clouding over. Great winter walking conditions.
