

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 21/02/2018

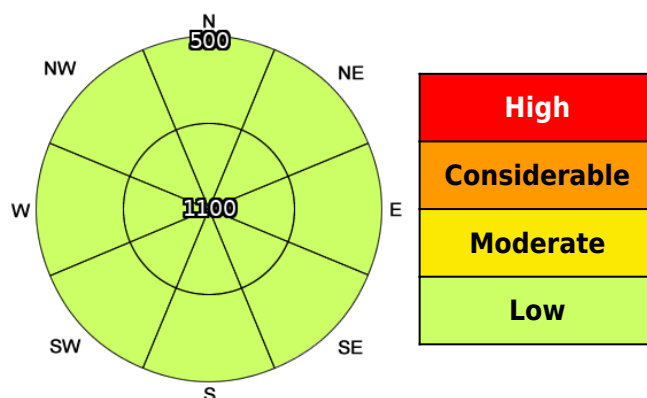

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

Stability is expected to continue to improve in all locations. Snow on sun exposed South-East to South facing slopes may soften and become more moist by the end of the afternoon. Some residual threat from collapsing cornices after sustained sunshine on some very steep East aspects. The avalanche hazard will be Low

Forecast Weather Influences

Dry throughout and cooler. Freezing level at around 700m. Clear skies from midnight may also mean a frost in glens as well.

Comments

Cornices may soften on selected East aspects later in the day.
