

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 25/02/2018 TO 18:00HRS Mon 26/02/2018

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Winds will be moderate East-South-East. No precipitation is forecast. The freezing level will lower overnight to hover around 400 metres.

Forecast Snow Stability and Avalanche Hazard

The snow pack will remain frozen with generally good stability on all aspects. Sun exposed aspects will soften slightly later in the day and some sloughing can be expected. The avalanche hazard will be Low.

Observed Avalanche Hazard - Sun 25/02/2018

Observed Weather Influences

Frosty this morning followed by a clear dry day with moderate South-East winds.

Observed Snow Stability and Avalanche Hazard

The snow pack is firm and stable on all aspects with some surface instabilities and softening on sun exposed slopes. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Firm snow - on most aspects first thing in the morning, sun exposed slopes softening later in the day. Good visibility with calm conditions.
Comments	Excellent travel conditions, some paths icy in the early morning. Snow surface is hard and care is required. Much softer in the afternoon on sun exposed aspects.
