

**THE AVALANCHE HAZARD WILL BE MODERATE**

**Avalanche Hazard Forecast for Tuesday 06/03/2018**

**Avalanche Problems**

**Wind Slab**

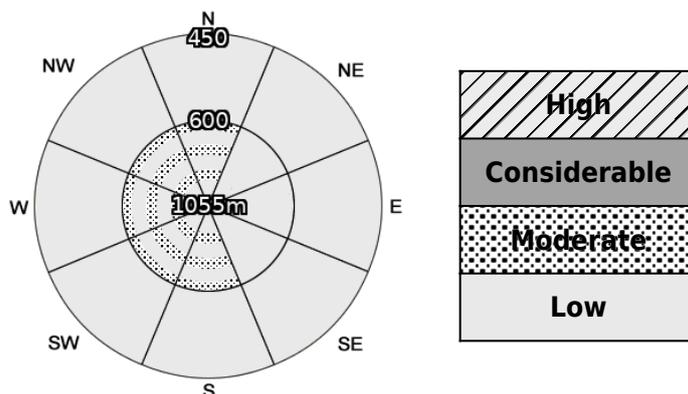

**Persistent Weak Layers**

**Cornices**

**Forecast Snow Stability & Avalanche Hazard**

The old snowpack will remain firm and stable throughout. Localised accumulations of moderately bonded windslab will persist and continue to build in wind sheltered aspects. Most affected are steep slopes, South-West to North-West aspects above 600 metres, notably gullies, scarp slopes and coire rims. Cornices will continue to build above these aspects.. Minor cross loading on selected sheltered North and South aspects. The avalanche hazard will be Moderate

**Forecast Weather Influences**

Winds remaining Easterly and slightly increasing in strength becoming strong by early morning accompanied by showers from early morning onwards. These falling as snow above 300 metres as the freezing level remains fairly constant at around 400 metres.

**Comments**

Extensive areas of hard snow ice above 500 metres. 600 metres cloud base most of the day.
