

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 13/03/2018 TO 18:00HRS Wed 14/03/2018**

Hazard Level	Avalanche Probability
<b>Very High</b>	Widespread Natural and Human triggered avalanches will occur.
<b>High</b>	Natural and Human triggered avalanches will occur.
<b>Considerable</b>	Natural Avalanches possible. Human triggered avalanches are likely
<b>Moderate</b>	Natural Avalanches unlikely. Human triggered avalanches possible.
<b>Low</b>	Natural Avalanches very unlikely. Human triggered avalanches not likely.

**Forecast Weather Influences**

It will remain mainly dry through most of the day, although some light rain is possible towards the end of the day. The freezing level will rise well above the summits through the day. Strong winds will be from the South-East.

**Forecast Snow Stability and Avalanche Hazard**

The snowpack will thaw at all levels. Some wet snow instabilities will occur on steep slopes on mainly North-East to North-West aspects above 800 metres. Remaining cornices will slump and be prone to collapse. The avalanche hazard will be Moderate.

**Observed Avalanche Hazard - Tue 13/03/2018**

**Observed Weather Influences**

There were some pleasant sunny spells as well as cloudy periods and a few very brief snow showers through the day. Winds were light, and the freezing level was around 1000 metres.

**Observed Snow Stability and Avalanche Hazard**

The snowpack was quite firm in the morning, tending to soften through the day, particularly on Southerly aspects and at lower levels. A few areas of well bonded windslab remain at higher levels in sheltered Northerly aspects. The snowpack is generally stable on all aspects and altitudes. The avalanche hazard is Low.

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Good cover above 600m, firm in the morning, softening through the day. Visibility coming and going through the day. Winds approx 10mph or less.

**Comments**

Looks like being a windy day ahead
