

**THE AVALANCHE HAZARD WILL BE LOW****Avalanche Hazard Forecast for Wednesday 21/03/2018****Avalanche Problems****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

The snowpack will thaw at all levels through the day, becoming wet, particularly at lower elevations, as the rain intensifies. Some softening and minor surface instabilities will occur in the snowpack, however, it will remain generally stable. Cornices will become weak and prone to collapse. Falling ice will present a hazard. The avalanche hazard will be Low.

**Forecast Weather Influences**

Much milder during the day as an Atlantic warm front moves in, with rain at all levels, preceded by a brief period of summit snow. The freezing level will rise above the summits by daybreak and the moderate South-West wind will strengthen overnight, veering and becoming a strong Westerly later.

**Comments**

A mild spell is expected before becoming cooler on Friday.
