

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 31/03/2018

Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The general snowpack will remain firm, well consolidated and stable throughout, very firm at higher elevations and on exposed terrain. Small localised areas of windslab will persist, mainly above 750 metres on South-West to North-West aspects, with gully exits and scarp slopes particularly affected. Fresh cornices will exist above similar aspect slopes. The avalanche hazard will be Moderate.

High
Considerable
Moderate
Low

Forecast Weather Influences

A more settled day is expected, mostly dry, partly cloudy and only an isolated shower possible. The fresh East wind will gradually ease through the period, becoming a light North-Easterly in the afternoon. Remaining cold with the freezing level around 300 metres overnight, rising to around 600 metres through the day.

Comments

A period of more settled weather forecast with only the odd flurry of snow. Remaining cold with significant windchill on the summits.
