

THE AVALANCHE HAZARD WILL BE MODERATE
Avalanche Hazard Forecast for Wednesday 04/04/2018
Avalanche Problems

Wind Slab

Persistent Weak Layers

Cornices
Forecast Snow Stability & Avalanche Hazard

The older snow pack will remain firm and frozen and generally stable. There will be some wind scouring on North to East wind exposed aspects. Areas of wind slab will persist and become deeper on high South-East to South-West aspects above 750 metres with some cross loading affecting South-East through Southerly to North-West aspects. Cornices will develop further and threaten. The avalanche hazard will be Moderate.

Forecast Weather Influences

Fresh North-North-East winds will ease slightly becoming moderate Northerly by midday. Heavy snow showers are forecast. The freezing level will remain around 400 metres.

Comments

An unpleasant day on the tops but walkers enjoying the lower sheltered paths, the car parking places were quite busy.
