

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 05/04/2018

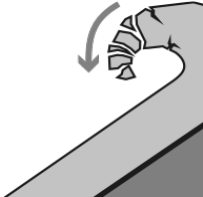

Avalanche Problems

Wind Slab

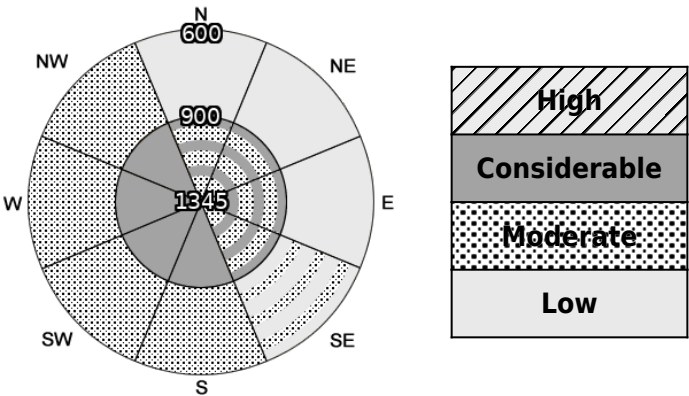

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Existing unstable windslab will remain, with greatest accumulations on South through West to North-West aspects above 900 metres. Redistribution of existing snow and additional snowfall will deposit unstable windslab on other aspects, especially on North through East to South-East aspects above 900 metres. Large, potentially fragile, cornices will be present above many aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

It is expected to be dry overnight with light snow showers above around 500 metres through the day. Winds will initially be moderate Northerly then from late evening backing South-Westerly; light to moderate mainly West-South-Westerly during the day. The freezing level will rise to around 650 metres during the afternoon.

Comments

Deep snow in many places.
